A 14T front sprocket makes the DL1000 a tad sprightlier and gets the mill running in its sweet spot of about 4,000rpm at 100km/h. An ex-Suzuki mechanic tells me that the engine lasts longer kept spinning at 4,000-5,000 revs, rather than the more natural-feeling 3,000-3,500, at which the Strom still provides plenty of go. Something to do with the pulses being smoother on the bottom end.
